

MAKING MINDS

A Constructive Introduction to the
Computational Theory of Mind

Gabriel Greenberg

10.1.2026

“I never satisfy myself until I can make a mechanical model of a thing.
If I can make a mechanical model, I can understand it.”

— Lord Kelvin, 1884

Table of Contents

Unit 1: COMPUTATION

1. The Cognition-Body Problem	6
2. What is a Computer?	10
3. Logic Gates & Combinatorial Circuits	14
4. Functions	19
5. Systems of Representation	24
6. Defining Computation	30
7. Computation as a 3-way Relation	37
8. Functional Abstraction	38
9. Function Composition	39
10. The Story of Binary Successor	42
11. Lessons from Binary Successor	45
12. Real and Ideal Computers	46
13. Introducing Turbots	47
14. Thought as symbol processing	50
15. Artificial and Natural Computers	53
16. The Computational Theory of Mind	57

Unit 2: LEVELS

17. Memory	63
18. Physical Memory	64
19. Machines in Time: Sequential Circuits	68
20. Computing in Time	73
21. Computational Power	78
22. The Method of State Analysis	83
23. State Abstraction	88
24. The Concept of Abstraction	93
25. Finite State Machines	101
26. What is an Algorithm?	106
27. Levels of Abstraction	109

Unit 3: COGNITION

28. Turing Machines	116
29. Computing with Turing Machines	124
30. Recursion	128
31. Turing Machine Abstraction and Composition	134
32. Binary Turing Machines	137
33. The Mathematical Tree	139
34. Computational Navigation	142
35. The Desert Ant	145
36. Physical Cognition	150
37. Machines and Programs	160
38. The Universal Machine	164
39. Cognitive Architecture	170
40. Computation as Consciousness	173
41. Computational Theory of Mind: The Long View	176
