MAKING MINDS

A Constructive Introduction to the Computational Theory of Mind

Gabriel Greenberg

10.15.2026

“I never satisfy myself until I can make a mechanical model of a thing.
If I can make a mechanical model, I can understand it.”

— Lord Kelvin, 1884

Table of Contents

Unit 1: COMPUTATION

1. The Cognition-Body Problem 6
2. What is a Computer? 10
3. Logic Gates & Combinatorial Circuits 14
4. Functions 19
5. Systems of Representation 24
6. Defining Computation 30
7. Functional Abstraction 36
8. Function Composition 38
9. The Story of Binary Successor 41
10. Lessons from Binary Successor 44
11. Real and Ideal Computers 47
12. Introducing Turbots 48
13. Thought as symbol processing 51
14. Artificial and Natural Computers 55
15. The Computational Theory of Mind 59

Unit 2: LEVELS

16. Memory 65
17. Physical Memory 66
18. Machines in Time: Sequential Circuits 70
19. Computing in Time 75
20. Computational Power 80
21. The Method of State Analysis 85
22. State Abstraction 90
23. The Concept of Abstraction 95
24. Finite State Machines 103
25. What is an Algorithm? 108
26. Levels of Abstraction 111

Unit 3: COGNITION

27. Turing Machines 118
28. Computing with Turing Machines 126
29. Recursion 130
30. Turing Machine Abstraction and Composition 136
31. Binary Turing Machines 139
32. The Mathematical Tree 141
33. Computational Navigation 144
34. The Desert Ant 147
35. Physical Cognition 152
36. Machines and Programs 162
37. The Universal Machine 166
38. Cognitive Architecture 172
39. Computation as Consciousness 175
40. Computational Theory of Mind: The Long View 178
