

MAKING MINDS

A Constructive Introduction to the
Computational Theory of Mind

Gabriel Greenberg

9.24.2026

“I never satisfy myself until I can make a mechanical model of a thing.
If I can make a mechanical model, I can understand it.”

— Lord Kelvin, 1884

Table of Contents

Unit 1: COMPUTATION

1. The Cognition-Body Problem	6
2. What is a computer?	10
3. Logic Gates & Combinatorial Circuits	14
4. Functions	19
5. Systems of Representation	24
6. Defining Computation	30
7. Computation as a 3-way Relation	37
8. Functional Abstraction	38
9. Function Composition	39
10. The Story of Binary Successor	42
11. Lessons from Binary Successor	45
12. Real and Ideal Computers	46
13. Introducing Turbots	47
14. Thought as symbol processing	50
15. Artificial and Natural Computers	53
16. The Computational Theory of Mind	57

Unit 2: LEVELS

17. Memory	62
18. Physical Memory	63
19. Machines in Time: Sequential Circuits	67
20. Computing in Time	72
21. Computational Power	77
22. The Method of State Analysis	82
23. State Abstraction	87
24. The Concept of Abstraction	92
25. Finite State Machines	100
26. What is an Algorithm?	105
27. Levels of Abstraction	108

Unit 3: COGNITION

28. Turing Machines	115
29. Computing with Turing Machines	123
30. Recursion	127
31. Turing Machine Abstraction and Composition	133
32. Binary Turing Machines	136
33. The Mathematical Tree	138
34. Computational Navigation	141
35. The Desert Ant	144
36. Physical Cognition	149
37. Machines and Programs	159
38. The Universal Machine	163
39. Cognitive Architecture	169
40. Computation as Consciousness	172
41. Computational Theory of Mind: The Long View	175
