

MAKING MINDS

A Constructive Introduction to the
Computational Theory of Mind

Gabriel Greenberg

10.6.2026

“I never satisfy myself until I can make a mechanical model of a thing.
If I can make a mechanical model, I can understand it.”

— Lord Kelvin, 1884

Table of Contents

Unit 1: COMPUTATION

1. The Cognition-Body Problem	6
2. What is a Computer?	10
3. Logic Gates & Combinatorial Circuits	14
4. Functions	19
5. Systems of Representation	24
6. Defining Computation	30
7. Functional Abstraction	36
8. Function Composition	38
9. The Story of Binary Successor	41
10. Lessons from Binary Successor	44
11. Real and Ideal Computers	45
12. Introducing Turbots	46
13. Thought as symbol processing	49
14. Artificial and Natural Computers	52
15. The Computational Theory of Mind	56

Unit 2: LEVELS

16. Memory	62
17. Physical Memory	63
18. Machines in Time: Sequential Circuits	67
19. Computing in Time	72
20. Computational Power	77
21. The Method of State Analysis	82
22. State Abstraction	87
23. The Concept of Abstraction	92
24. Finite State Machines	100
25. What is an Algorithm?	105
26. Levels of Abstraction	108

Unit 3: COGNITION

27. Turing Machines	115
28. Computing with Turing Machines	123
29. Recursion	127
30. Turing Machine Abstraction and Composition	133
31. Binary Turing Machines	136
32. The Mathematical Tree	138
33. Computational Navigation	141
34. The Desert Ant	144
35. Physical Cognition	149
36. Machines and Programs	159
37. The Universal Machine	163
38. Cognitive Architecture	169
39. Computation as Consciousness	172
40. Computational Theory of Mind: The Long View	175
