MAKING MINDS

A Constructive Introduction to the Computational Theory of Mind

Gabriel Greenberg

10.27.2026

“I never satisfy myself until I can make a mechanical model of a thing.
If I can make a mechanical model, I can understand it.”

— Lord Kelvin, 1884

Table of Contents

Unit 1: COMPUTATION

1. The Cognition-Body Problem 6
2. What Is a Computer? 10
3. Logic Gates & Combinatorial Circuits 14
4. Functions 19
5. Systems of Representation 24
6. Defining Computation 30
7. Functional Abstraction 36
8. Sequential Composition 38
9. The Story of Binary Successor 41
10. Lessons from Binary Successor 44
11. Real and Ideal Computers 47
12. Introducing Turbots 48
13. Thought as Symbol Processing 51
14. Artificial and Natural Computers 55
15. The Computational Theory of Mind 59

Unit 2: LEVELS

16. Memory 64
17. Physical Memory 65
18. Machines in Time: Sequential Circuits 69
19. Computing in Time 74
20. Computational Power 79
21. The Method of State Analysis 84
22. State Abstraction 89
23. The Concept of Abstraction 94
24. Finite State Machines 102
25. What Is an Algorithm? 107
26. Levels of Abstraction 110

Unit 3: COGNITION

27. Turing Machines 117
28. Computing with Turing Machines 125
29. Recursion 129
30. Turing Machine Abstraction and Composition 135
31. Binary Turing Machines 138
32. The Mathematical Tree 140
33. Computational Navigation 143
34. The Desert Ant 146
35. Physical Cognition 151
36. Machines and Programs 161
37. The Universal Machine 165
38. Cognitive Architecture 171
39. Computation as Consciousness 174
40. Computational Theory of Mind: The Long View 177
